

HE'S IN YOUR LAB!

Reusable
biohazard containers
can harbor
The Contaminator
EVEN AFTER
DECONTAMINATION!*

Disposable Biohazard Containers Eliminate Contamination

**Use Whitney
disposable containers
and tame The Contaminator**

**Watch the video on the web at:
FightTheContaminator.com**

* -- Research studies have shown that up to 99% of reusable biohazard containers can be contaminated, even after reprocessing. One study found that 30% showed traces of serious viruses, including 10% with HIV. For details of the studies, watch our video: The Contaminator

TAME THE CONTAMINATOR!

Whitney disposable biohazard containers are for you:

Do you use biohazard bags containers or or liners in reusable containers or racks?

- Whitney disposable containers can be an effective substitute for reusable containers and bags, reducing or eliminating contamination.
- Reusable container and racks can become contaminated during use.
- This contamination remains after the bag is removed.
- OSHA regulations require regular cleaning of reusable containers, but this often doesn't happen.
- Eliminate The Contaminator when you throw away Whitney disposable containers!

Do you use a waste disposable service with reusable containers?

- Whitney disposable containers can be an effective adjunct to such services.
- Research shows that reusable containers can harbor contamination, **EVEN AFTER DECONTAMINATION!**
- If your facility must contractually use service, it still makes sense to use disposable containers at the workstation, the point of waste generation.
- Disposable containers can collect waste at the point of use for deposit into the central waste container provided by your service.
- Isolate The Contaminator from your workstation with Whitney containers!

Either way, you can tame The Contaminator with Whitney
